

## Get to Know Your Ribeye Roll

### Description of IMPS 112 —

Ribeye roll that includes the longissimus dorsi, spinalis dorsi, complexus, and multifidus dorsi muscles. The “lip” (serratus dorsalis and longissimus costarum muscles and related intermuscular fat) on the short plate side is removed. All other muscles, bones, cartilages, backstrap and the exterior fat cover also are removed.
