

# North Dakota Tree Selector

**Scientific Name:** *Populus alba*

**Family:** Salicaceae (Willow)

**Hardiness:** Zone 3

**Leaves:** Deciduous

**Plant Type:** Tree

**Growth**

**Rate:** Fast

**Mature Height:** >45'

**Longevity:** Long

**Power Line:** No

**Ornamental**

**Flowers:** Inconspicuous

**Fruit:** n/a

**Fall Color:** No

## White Poplar

### Description

Medium to tall tree sometimes confused with silver maple since the leaves on long shoots are maple-shaped, while leaves on short shoots are shaped more like aspen leaves. The tree is native to central and southern Europe, western Siberia and central Asia. Introduced to North America by early settlers. The largest tree in North Dakota is 65 feet tall with a canopy spread of 50 feet.

### Preferences

**Light:** Partial shade to full sun.

**Water:** Appears slightly more drought tolerant than cottonwood.

**Soil:** Clay to sandy soils.

### Comments

White poplar is tolerant of urban pollutants. It does have a suckering habit which poses challenges in lawns and other areas dominated by turfgrass. Prolific suckering will occur without continuous mowing.

White poplar is a fast growing tree and it is pretty weak wooded because of this. Its shallow root system may buckle streets and sidewalks.
