DESCRIPTION

A RURAL HOME OF WOOD—(PLAN SE-2)

THIS IS A LOW-COST HOUSE OF WOOD, DESIGNED PARTICULARLY FOR RURAL FAMILIES WITH ANNUAL INCOMES OF ABOUT $3,000. THE HOUSE WAS DESIGNED BY HAROLD F. ZORNIG, ARCHITECTURAL ENGINEER ON THE HOUSING RESEARCH PROJECT STAFF, FORESTRY SCIENCES LABORATORY, ATHENS, GEORGIA. THIS LABORATORY IS A UNIT OF THE SOUTHEASTERN FOREST EXPERIMENT STATION, U.S. DEPARTMENT OF AGRICULTURE, FOREST SERVICE, ASHEVILLE, NORTH CAROLINA.

THE HOUSE WAS DESIGNED TO PROVIDE APPROXIMATELY 1000 SQUARE FEET OF LIVING SPACE, AND TO BE BUILT ON A SLOPING SITE. IT INCORPORATES A PRESSURE-TREATED WOOD PIER FOUNDATION SYSTEM.

THE DESIGNER ESTIMATES THAT THIS HOUSE COULD BE CONSTRUCTED BY A BUILDING CONTRACTOR FOR ABOUT $6.00 TO $7.00 PER SQUARE FOOT. THIS COST DOES NOT INCLUDE THE COST OF LAND, FINANCING, OR OUTSIDE UTILITIES.

THE HOUSE DESIGN PROVIDES AN ENLARGED CENTRAL HALL AREA IN WHICH A CENTRAL WALL FURNACE IS LOCATED. THIS LARGE HALL AREA CAN BE USED AS SPACE FOR FAMILY ACTIVITIES, REALLY A BONUS FEATURE IN A HOUSE OF THIS SIZE. THREE MEDIUM-SIZED BEDROOMS, A SEPARATE UTILITY ROOM, AND ATTIC STORAGE ARE ALSO INCLUDED. NOTE THAT BEDROOM SPACE SHOULD BE ADEQUATE FOR A FAMILY OF NINE OR TEN.

THE PARTICLE BOARD PARTITIONS ARE REMOVABLE AND OFFER A DEGREE OF FLEXIBILITY IN THE FLOOR PLAN. THE WOOD PIER FOUNDATION SYSTEM IS PARTICULARLY SUITED FOR SLOPING SITES BECAUSE VERY LITTLE SITE GRADING WOULD BE NEEDED. IT MIGHT ALSO BE THE BEST FOUNDATION SYSTEM WHERE THE GROUND IS SWAMPY OR DIFFICULT TO GRADE BECAUSE OF ROCK.
