

100 HEAD COW-CALF OPERATION...

Cows wintered in yard area, calves weaned & fed to spring. Consider more mechanization for finishing calves out. (See pages — & —). Lot components can be separated depending on wind protection, drainage, feed storage, access to pasture & farm yard. Cow housing requirements will depend on existing protection. Lot drainage not critical for winter only. Consider lights, water, feed & bedding storage for bull & maternity housing.
