JOBS DESCRIPTION

Ralco Nutrition, Inc.

Swine Research Coordinator

DEPARTMENT/DIVISION: Technical Services
EFFECTIVE DATE: 2018

JOB SUMMARY:
As the Swine Research Coordinator, you are responsible for working with the necessary personnel to execute swine research protocols to support the advancement of research and development of Ralco technologies and programs. Expertise in research and animal production will be imperative to the success and efficiency of this position. There is a need for this position to be highly organized and disciplined in performing these services in a timely manner.

Key Work duties and Required Skills:

1. As a member of the technical team you must foster teamwork among all members of the technical team, sales and marketing organizations and other Ralco operational and business units and personnel.
2. You will provide expertise in executing the research process from protocol development to final report generation.
3. You will be responsible for organizing the necessary functions associated with research projects and communicating with the appropriate people and locations to accomplish these functions. This can include pig delivery, feed delivery, farm data collection (pig weights, ultrasound measurements, blood collection, etc), pig marketings, and carcass data.
4. You will work to execute the research protocols in conjunction with the research facility personnel.
5. You will be responsible for maintaining communication with the appropriate technical team personnel on matters related to specific research projects.
6. You will be responsible for timely data summarization to be used for statistical analysis and for final data reporting for the research experiments conducted.
7. You will be responsible for maintaining organized records of protocols, data, and final research reports for easy access and reference.
8. It is expected that you will take the initiative to develop your own unique professional development plan to ensure that you are pursuing and fulfilling your professional and personal goals and share that plan with your supervisor and other relevant Ralco personnel.
9. You should occasionally attend industry and scientific meetings and conferences for the purpose of networking with other technical colleagues from industry, academia and governmental agencies.
10. You also have a responsibility to effectively share the most relevant information gained from these meetings with other Ralco technical team members.
11. You need to be proactive in seeking to understand the needs of the various research managers to ensure that you are exceeding their expectations.

Job Requirements:
Education: Minimum of a MS in animal science.
Experience: Three years of experience in research execution is preferred which includes experience gained during graduate school training. Must possess a knowledge of animal production.
Location: This position will be based in Marshall, MN.
General: Satisfactorily complete introductory period per company policy.
Physical: The following activities are required as needed to perform the job function; lifting, driving, bending, climbing, carrying and twisting. Confined space entry is not a required job function.
Travel: This position requires travel to customer and non-customer sites worldwide.
