

## Monitoring Procedure Time Table

<b>Photo Plot Method</b>		
Minimum of 3 photo periods per year: information collected from permanent photo plot		
1 <sup>st</sup>	early June	grazing-ready stage
2 <sup>nd</sup>	mid July to early August	peak herbage biomass
3 <sup>rd</sup>	mid to late September	fall tiller growth
4 <sup>th</sup>	pastures grazed after mid October	end of grazing
<b>Major Plant Species Present List</b>		
Once a year: information collected from permanent photo plot		
	mid July to mid August	plants identifiable
<b>Nonquantitative Assessment of Rangeland Health Status</b>		
Once a year: information collected from vicinity of permanent photo plot		
	early June to late July	characteristics observable
