

2006 Cultivar Trials of Bedding Plants

Extension Horticulturist – Department of Plant Sciences

Introduction

The Plant Sciences Department at NDSU conducted performance trials on over 300 annual bedding plants during the 2006 growing season. The main research garden is located in Fargo, on the corner of 18th street and 12th avenue north. Two other sites are located at the Research Extension Centers in Dickinson and Williston, ND. Official entries (usually 150-200) are grown at all three sites while an additional 150-200 cultivars are also grown at the Fargo site.

The Horticulture Demonstration and Research plots in Fargo are for educational, research and display purposes. The gardens are in the process of being relocated and while the annuals, iris and daylily beds are finished, the perennial area and the shade area are still under construction. Additional gardens being planned include a rose garden, an Indian garden, an area for vegetables and a sensory garden. The bedding plant trial is an official display garden of All-America Selections. The daylily garden is an official display garden of the American Hemerocallis Society and houses more than 1100 cultivars of daylilies, most of which are considered historical, or pre-1970, cultivars.

The beds are open to the public throughout the growing season and guided tours are available upon request.

Culture

The majority of the plants for the bedding plant trials are seeded in the horticulture and forestry greenhouse on the NDSU campus from January through April. When at the proper stage, seedlings are transplanted into cell packs containing a peat-based growing

medium. Exceptions to this are entries from Fischer USA, Inc. which were received as rooted cuttings in March and finished in the greenhouses.

The Dickinson and Williston sites had six plants of each official cultivar tested while Fargo had twelve of each official cultivar, 12 plants of mixed cultivars, and 6 of the unofficial cultivars planted. Dickinson was planted on May 22nd and 23rd, Williston on May 23rd and 25th, while Fargo was planted June 1st through June 6th.

In Dickinson and Williston plants were watered in with Sterns Miracle-Gro® (15-30-15)¹ while Preen® Garden Weed Preventer Plus Fertilizer (9-17-9) was put down at the Fargo site.

The Dickinson site has overhead irrigation set up on a timer, while Williston and Fargo have drip irrigation applied as needed.

Weeding was done by hand in Dickinson and Williston while Razor® and Preen® were used in Fargo along with hand-weeding.

No insecticides were used at any of the locations.

Site Information

Fargo

The main trial garden is located in Fargo at the corner of 18th street and 12th avenue north on the west side of campus. This was the second year the annuals were planted in the new beds. Many of the annual beds are now raised with a loam-compost mix of soil. Drip irrigation using t-tape was built into the beds and worked very well, especially during June when precipitation was 2+ inches below normal.

The beds are in full sunlight and the shade area is not yet completed so we continued to use shade cloth for begonias, impatiens, coleus, pansies and other shade plants.

The biggest disease problem this year was powdery mildew which infected the pansies and zinnias late in the summer. There were also a few insect pests on cleome and hollyhock but no control was needed.

As seen in table 1, precipitation was below normal for Fargo while the temperature was a bit above normal. This combination explains the high incidence of powdery mildew in the zinnia. Table 1 shows weather data for Fargo.

Table 1. 2006 and 1971-2000 June-August Average Temperature and Precipitation for Fargo, ND.²

	Average Temperature (°F)		Precipitation (inches)	
	2006	1971-2000	2006	Avg. 1971-2000
June	68	66	0.99	3.5
July	75	70.6	2.03	2.88
August	70	69	2.45	2.52

Dickinson

The Dickinson Trial garden is located at the Research Extension Center on the west side of State Street. The soil here is lighter and

sandier than in Fargo and the weather tends to be drier and warmer. Shade plants are grown in raised beds under natural shade provided by trees.

The 'Fresh Look' series of celosia did very well in Dickinson this year as did the sweet potato vines, fountain grass and verbena. There was a bit of an over-watering problem which adversely affected the vinca and some of the petunias, especially toward the end of the summer.

Weather in Dickinson was warm and dry in 2006. Precipitation all summer was well below average while temperatures were slightly above average. Table 2 shows weather data for Dickinson.

Table 2. 2006 and 1971-2000 May-August Average Temperature and Precipitation for Dickinson, ND.

	Average Temperature (°F)		Precipitation (inches)	
	2006	1971-2000	2006	Avg. 1971-2000
May	56	53.4	1.90	2.24
June	66	62.4	0.79	3.57
July	75	68.1	0.88	2.20
August	71	67.3	0.91	1.65

Williston

The Williston Trial garden is located at the Research Extension Center on Highway 2 west of Williston. The soil here is also fairly light but heavier than in Dickinson. Drip irrigation is used for supplemental watering and shade plants are grown under the natural shade of pine trees.

As usual, geraniums did very well here, as did the petunias and verbena. The shade plants are under pine trees and even though they are irrigated, there is a bit of competition which affects the impatiens, New Guinea impatiens, begonias, coleus and pansies. They never seem to perform as well here as in Fargo or Dickinson.

As with the rest of the state, precipitation was below normal for May-August while temperatures were slightly higher than average. Table 3 shows weather data for Williston.

² Temperature and precipitation data are from NDAWN and the National Climatic Data Center.

All-America Selections

The NDSU trial garden is an official display garden of All-America Selections (AAS). AAS was founded in 1932 as a way for home gardeners to learn about new and improved varieties of flowers and vegetables. The red, white and blue AAS logo found on seed packets, in catalogs, and in garden articles usually indicates superior cultivars that have been tested in a variety of locations across the United States and Canada. The following are AAS winners grown at all three locations in 2007.

2002 Winners:

Cleome ‘Sparkler Blush’
Geranium ‘Black Velvet Rose’
Ornamental Pepper ‘Chilly Chili’
Pansy ‘Ultimo Morpho’
Petunia ‘Lavender Wave’
Petunia ‘Tidal Wave Silver’
Rudbeckia ‘Cherokee Sunset’
Vinca ‘Jaio Scarlet Eye’

2003 Winners:

Agastache ‘Golden Jubilee’
Carnation ‘Can Can Scarlet’
Dianthus ‘Corona Cherry Magic’
Eustoma ‘Forever White’
Gaillardia ‘Sundance Bicolor’
Ornamental Millet ‘Purple Majesty’
Petunia ‘Blue Wave’
Petunia ‘Merlin Blue Morn’

Rudbeckia ‘Prairie Sun’
Vinca ‘Jaio Dark Red’

2004 Winners:

Celosia ‘Fresh Look Red’
Celosia ‘Fresh Look Yellow’
Gypsophila ‘Gypsy Deep Rose’
Hollyhock ‘Queeny Purple’
Petunia ‘Limbo Violet’

2005 Winners:

Gaillardia aristata ‘Arizona Sun’
Vinca ‘First Kiss Blueberry’
Zinnia ‘Magellan Coral’

2006 Winners:

Dianthus ‘Supra Purple’
Diascia ‘Diamonte Coral Rose’
Nicotiana ‘Perfume Deep Purple’
Ornamental Pepper ‘Black Pearl’
Salvia farinacea ‘Evolution’
Zinnia ‘Zowie! Yellow Flame’

2007 Winners:

Celosia ‘Fresh Look Gold’
Petunia ‘Opera Supreme Pink Morn’
Vinca ‘Pacifica Burgundy Halo’

Evaluations

Plants were evaluated twice over the growing season for height, spread, vigor, uniformity of size and bloom, and overall appearance. In Fargo, the first evaluation was July 27th while the second was September 6th. The Dickinson evaluations were July 13 and September 14th and 15th. Williston plants were evaluated July 14th and September 14th.

If plants had good bloom but were lacking in size uniformity, there is an * preceding the height and spread measurement on the evaluation table for that site (pages 15-40). If the cultivar had good bloom,

vigor and uniformity of size and bloom, there is ** preceding each height and spread measurement; and if a cultivar was an outstanding performer, there is *** preceding each height and spread measurement.

Top performers (*, **, or *** for **either** evaluation time) and star performers (*, **, or *** for **both** evaluation times) for each location are on pages 6-14 of the report. The following cultivars got top ratings at each location for each evaluation time:

Geranium 'Black Velvet Rose'
Geranium 'Crystal Palace Gem'
Geranium 'Himalaya Fire'
Geranium 'Rocky Mountain Scarlet'
Ipomoea-Sweet Potato Vine 'Blackie'
Ipomoea-Sweet Potato Vine 'Marguerite'
Pennisetum-Fountain Grass
Petunia 'Jamboree Light Blue'
Petunia 'Jamboree White II'
Petunia 'Lavender Wave'
Petunia 'Tidal Wave Silver'
Petunia 'Whispers Red'
Salvia 'Red Hot Sally II'
Verbena 'Lanai Lavender Star'

Field Days

Field Days in Dickinson and Williston were held July 13th and July 14th, respectively, in conjunction with field days at the research extension centers. Field days in Fargo have been put on hold until more of the new beds are done. Hopefully, we will be able to continue with Fargo field days starting in 2007.

Acknowledgements

Thanks go to supporters of the 2006 gardens: All-America Selections; Ball Seed Company; Ernst Benary of America, Inc.; Fischer, USA, Inc.; Grimes Seeds and Plants; and PanAmerican Seed. The support of these companies is greatly appreciated and we

hope results from our efforts are beneficial in their research for new and improved cultivars.

Thanks also to Kris Ringwall and the staff at the Dickinson Research Extension Center, including retired county agent Jerry Larson; and Jerry Bergman, Lorna Bradbury and the staff at the Williston Research Extension Center. The bedding plant trial evaluation program would not be possible without the help of these talented and dedicated people.
