

Northern Hardy Fruits at NDSU-CREC

VARIETY	Source	COLOR	ORIGIN	NOTES:
Apple - <i>Malus domestica</i>				
1 Haralred	Hwy 200 Nursery, Glenfield, ND	Bright Red	A red selection of Haralson	Fruit firm with white flesh, a bit sweeter than Haralson. Good keeper. Some resistance to fireblight. <i>Ripens very late at CREC. Over produces at a young age. Thin the fruit.</i>
2 Hazen	Hwy 200 Nursery, Glenfield, ND	Red	Duchess X Starking Delicious	Produces a naturally semi-dwarfed tree. Pleasant taste, firm juicy greenish-yellow flesh, slightly coarse grained. NDSU introduction, 1980. <i>At CREC, early years' growth is vigorous and susceptible to fireblight. Fruit is large and overripens very quickly. Observe near harvest and chill fruit quickly.</i>
3 Honey Crisp	Hwy 200 Nursery, Glenfield, ND	Red/Yellow	Macoun X Honeygold	A sweet, exceptionally crisp-textured apple rated superior for fresh eating. Excellent keeper. <i>At 6 years, bearing at CREC is still sparse. Variety is noted as a biennial bearer.</i>
4 Sweet Sixteen	Hwy 200 Nursery, Glenfield, ND	Striped Red	MN 447 X Northern Spy	Uniquely flavored sweet, crisp apple with good storage qualities. <i>Very upright growth = longer time until it bears fruit. Prune or train for more horizontal growth.</i>
5 Zestar	St. Lawrence Nurseries	Green, nearly 100% blushed red	State Fair X MN 447	A new cultivar from Minnesota breeding program. Sweet, crisp & juicy with great flavor. Excellent summer apple. Keeps several weeks in cold storage.
Aronia - <i>Aronia mitschurinii</i>				
<i>Not for fresh eating. Best processed or with a dairy product like ice cream or yogurt.</i>				
1 Viking	Raintree Nursery	Blue-Purple	Sweden	Incredibly productive, it is used for juices, jams, soft drinks and wines. Grown commercially.
2 Nero	Raintree Nursery	Blue-Purple	Soviet	"We can't tell the difference between it and Viking. Both are loaded with flavorful fruit every August." - Raintree Nursery <i>(At CREC we find Nero to have a hint of bitterness.) Plants are said to be slightly smaller than 'Viking'.</i>
3 Raintree Select	Raintree Nursery	Blue-Purple	Soviet	"We planted about 25 seeds from productive Russian Aronias and to our dismay all produced huge amounts of fruit. We selected this one for its slightly more compact bush habit, heavy production and flavor." - Raintree Nursery . <i>May have slight acidic brightness. Wines are nice.</i>
4 Aronia seedling	Raintree Nursery	Blue-Purple	E. Europe	"If the question is "which fruiting plant is the most productive", the conclusion is clearly Aronias. These native American bushes were bred for production and flavor in Eastern Europe. Each bush is almost covered with tasty black fruit." - Raintree Nursery <i>Slightly non-uniform plants.</i>
5 McKenzie	NRCS Lincoln-Oakes Nursery	Blue-Purple	unk.	Very similar to the other aronias, this cultivar was selected to grow faster and larger for windbreaks. It has similar fruit and production. <i>CREC is evaluating for flavor and production.</i>
Hardy Cherry - <i>P. cerasus</i> x <i>P. fruticosa</i>				
<i>Allow SK cherries to ripen until dark maroon in color.</i>				
1 SK Carmine Jewel	Canadian Propagator	Dark Red	Univ SK	Juicier than sweet cherries with similar sugar levels, but additional citric acid makes them tarter. Skin and flesh is dark red. Season runs from mid-July till the first or second week in August. Train to either a shrub or small tree. Plant height is 6 to 8 ft and has a low tendency to sucker.
2 SK Crimson Passion	Canadian Propagator	Red	Univ SK	Highest sugar content, lower acid levels. Excellent fresh eating cherry. No suckers. Fruit size is large at 5.8 grams per fruit. Highest sugar content – up to 22 brix. <i>This variety is harder to find.</i>
3 Bali or Evans Cherry	St. Lawrence Nurseries	Red	Alberta, CA	Bali has fruited after withstanding minus 43 degrees F. A vigorous grower and precocious producer. Ripens in late August, thus avoiding most bird pressure. Semi-dwarf. Yellow flesh. Great for U-Pick operations. <i>Let ripen longer for very sweet, mild fruit.</i>

Northern Hardy Fruits at NDSU-CREC

VARIETY	Source	COLOR	ORIGIN	NOTES:
Black Currants - <i>Ribes nigrum</i>				<i>A favorite! Excellent fruity-flavored processed products. Fruit is high in vitamin C, minerals and nutrients.</i>
1 Ben Lomand	Whitman Farms	Black	Scotland	The most popular commercial variety in Scotland because it is a very heavy producer with the traditional strong pungent flavor. <i>High rate of powdery mildew, but great-tasting fruit with vanilla note.</i>
2 Blackcomb - New	McGinnis Berry Crops	Black	British Columbia	High levels of resistance to foliar diseases, mildew, White Pine Blister Rust. Yields: 50% higher; Fruit size: 20% larger than Titania. Flowering is late mid-season with better late spring frost tolerance than Titania. Well suited to machine harvest.
3 <i>Black Down</i>	OGW + Whitman	Black	England	Blackdown bears abundant crops of sweet, juicy, jet black berries with delectable taste and aroma. Blackdown is great for a tasty snack and for delicious juice and jam.
4 Champion	Whitman Farms	Black	England	Plants large vigorous, upright-spreading, very dense, productive. Flowers late/Fruit late. Fruit quality good to very good.
5 Crandall	Whitman Farms	Black	US - Kan.	Not a European black currant. More ornamental, sweet and bland. Clove scented yellow flowers. <i>More like a gooseberry. Requires pectin to gel; fruit stays firm in jam. Ripens unevenly in mid-September.</i>
6 <i>Hilltop Baldwin</i>	Whitman Farms	Black	English	A heavy bearing, legendary English favorite with a sweet black currant flavor. Highest in Vitamin C. Rated best for jelly. Medium sized fruit with good flavor and a tough skin that allows it to be transported. Somewhat milder than the typical black currant. <i>Selection at CREC has variable plant and fruit characteristics.</i>
7 Minaj Smyriou	Whitman Farms	Black	Bulgaria	This new, self fertile introduction from Bulgaria is a heavy producer of tasty black currants on a manageable sized bush. <i>Fruit texture seems dry. Will evaluate several more seasons. Good production after 2012 freeze.</i>
8 <i>Swedish Black</i>	OGW + Whitman	Black	Sweden	Earliest ripening fruit will produce dried fruit with excellent flavor. Berries are less acid and sweeter than most other varieties. <i>This plant grows downward and is hard to pick, though the fruit is mild and sweet.</i>
9 <i>Titania</i>	Raintree Nursery	Black	Sweden	A very large berry with excellent taste...Our favorite black currant. Growth habit is vigorous and upright; extremely hardy. - St Lawrence Nursery <i>Planted commercially. Best overall. WPBR resistant.</i>
10 <i>Whistler- New</i>	McGinnis Berry Crops	Black	British Columbia	High yields, fair resistance to mildew and good resistance to White Pine Blister Rust. Growth habit is slightly spreading with medium vigor. Flowering is late-mid season with good tolerance for late spring frost. Production may be 50% higher than 'Titania'. Well suited to machine harvest.

NOTE: Currants with *italicized* names are enrolled in a replicated variety trial.

Red Currants - <i>Ribes rubrum</i>				<i>Tart, served as dessert or to company in Nordic areas. Use for jelly and wine. Very productive.</i>
1 Jhonkheer Van Tets	Whitman Farms	Red	Holland	Considered by many to be the best flavored red currant variety in the world. Early flowering (early April) makes Jonkheer van Tets susceptible to frost damage.
2 Red Lake	St. Lawrence Nurseries	Red	US- Minn.	One of the most popular varieties grown in North America. Fruit size is very large and of good quality with high juice content. Becoming quite susceptible to mildew and it does not have much tolerance to late spring frost. <i>Fruit size is not very large at CREC. Selection has very short fruit stems, making it hard to pick.</i>
3 Redstart	Whitman Farms	Red	?	Later than Red Lake or JVT, vigorous bush produces juicy berries. Grown in NY.
4 Rosetta	Whitman Farms	Red	Holland	Jhonkeer is a parent of this extremely productive new Dutch variety. Fruit is excellent for cooking. Ripens with Rovada, 3-4 weeks after JVT; strong bush produces good crop; long strigs.
5 Rovada	Whitman Farms	Red	Holland	Main variety for commercial production in Central Europe due to its excellent fruit quality and yield.
White Currants - <i>Ribes rubrum</i>				<i>Very mild flavored fruit, though tart. Very productive.</i>
1 Blanka	Whitman Farms	White	Slovakia	Blanka bears profuse amounts of very large, juicy, sweet, translucent berries. New Slovakian variety.
2 Swedish White	OGW	White	Sweden	One of the most productive varieties of White Currant. European gardeners appreciate Swedish White's very attractive, flavorful, sweet, and translucent berries. <i>Most mild white at CREC.</i>

Northern Hardy Fruits at NDSU-CREC

VARIETY		COLOR	ORIGIN	NOTES:
Elderberry - <i>Sambucus canadensis</i>				
<i>Have not been hardy above snow at CREC. Ripen too late. 'Adams' and 'Nova' removed for new cultivars.</i>				
1 Johns	St. Lawrence Nurseries	Purple	Canada	Originated in Nova Scotia Experiment Station. Has large berries and clusters, ripens earlier than Adams. Extremely vigorous.
2 York	St. Lawrence Nurseries	Purple	New York	Originated in NY State, 1964. A very large bush with fruit larger than Adams. Considered one of the best cultivars.
Gooseberry - <i>Ribes uva-crispa</i>				
<i>Thorny, but tasty. Hinnomaki Red is a worthwhile plant for the home garden.</i>				
<i>* These are the most disease resistant and only ones recommended. ** Hinnomaki Red is the best of these with very good flavor and sweetness. Use like fresh table grapes.</i>				
1 Black Velvet *	Whitman Farms	dark red	Canada	Large crops of sweet dark red fruit with an interesting flavor.
2 Captivator *	Whitman Farms	light red	Canada	Large teardrop shaped fruit, that is pink and sweet when ripe. Nearly thornless.
3 Hinnomaki Red **	Hwy 200 Nursery, Glenfield, ND	red	Finland	Outstanding flavor. The outer skin is tangy while the flesh is very sweet. <i>Best overall.</i>
4 Jahn's Prairie *	Whitman Farms	red	Canada	Highly productive bush with large red berries. Tasty sweet/tart flavor. Selected in Canada from the wild.
5 Jewel *	OGW	yellow	Polish	Profuse crops of unique, intensely flavored, peach colored berries.
6 Lepaa Red *	Whitman Farms	red	Finland	The medium-sized berries have a rich tart flavor. It is favored for pies and jams.
7 Red George *	OGW	red/black	Ukraine	Abundant crops of striking, very dark red, sweet & delicious fruit, which turn almost black when ripe.
8 Red Jacket *	Whitman Farms	green red	Europe or Canada	Skin smooth, rich, juicy, fragrant, sweet, very good to best, early. Plants large, vigorous, spreading, practically free from mildew, productive.
<i>The following gooseberries were eliminated due to disease.</i>				
a Hinnomaki Yellow	Whitman Farms	yellow	Finland	Outstanding aromatic flavor with a luscious aftertaste reminiscent of apricot.
b Invicta	Indiana Berry and Plant Co.	green	England	Popular in Catalogs. One of the largest Gooseberries, sweet and flavorful. Other reports are marginal.
c Pixwell	St. Lawrence Nurseries	purple	N. Dakota	Commonly sold and very productive cultivar developed in North Dakota in 1932. Low, 3-foot bushes with small thorns are very hardy.
d Poorman	Whitman Farms	red	Utah	Highly flavored, sweet table variety which can be eaten out of hand. Considered by many to be the best American gooseberry.
e Tixia	Nourse Farms	red	Swiss	Popular in Catalogs right now. Few thorns, or soft. Huge red fruits, sweet-tart with delicious flavor.
Grapes				
1 Bluebell	Great River Vineyard	Table/Juice	U. Minn.	Very cold hardy, early ripening, and disease resistant, but should not be planted on soils with pH above 7.0 where it would be prone to iron chlorosis. This blue, seeded table grape has a delightful, fruity, mild labrusca (Concord-like) flavor and thick skin. <i>May not fully ripen at CREC.</i>
2 Brianna	NDSU	White wine/ juice	Elmer Swenson	Should be fully ripe in early to mid September. Wine is balanced with pineapple nose and flavor. Also makes a flavorful white juice. Should be winter hardy in Southern SD. <i>Seems hardy at CREC.</i>
3 E.S. 6-16-30	Northeastern Vine Supply	White wine	Elmer Swenson	Very Disease resistant. Wine has very good body with a light floral nose similar to a French muscadet. A bit astringent in the finish. <i>Vines completely winter-killed 2011-12 (open, warm winter)</i>

Northern Hardy Fruits at NDSU-CREC

VARIETY		COLOR	ORIGIN	NOTES:	
Grapes - Continued					
4	Frontenac	Great River Vineyard	Red wine	U. Minn.	Wine quality can be excellent when fruit is able to ripen. Ripens late in the season, requires ample heat to reduce its typically high acid. It is also being made in well received Port wine. Most widely planted wine grape in Minnesota. <i>Monstrous plants, poor hardening-off, poor ripening at CREC.</i>
5	Frontenac Gris	Northeastern Vine Supply	White wine	U. Minn.	A sport of Frontenac. Suitable for high quality table and dessert wines, possibly ice wine as well. Ripens mid season with aromas that include peach, apricot, citrus, and pineapple. <i>Monstrous plants, poor hardening-off, poor ripening at CREC</i>
6	King of the North	Seaway Coldhardy Grapes	Red wine/Table Juice		Makes a good Labrusca style wine grape. Good flavor as a table grape and makes a delicious red grape juice. Extremely vigorous but notably susceptible to downy mildew. Better in a drier climate. <i>Poor ripening at CREC to date. Very Sour.</i>
7	LaCrescent	Northeastern Vine Supply	White wine	U. Minn.	Makes a wonderful white wine with an apricot-pineapple flavor. The fruit turns a beautiful golden brown when fully ripe. The vine is a vigorous grower with a very attractive dark green foliage. You may need a good spray program to manage downy mildew and black rot.
8	Louise Swenson	Great River Vineyard	White wine	Elmer Swenson	This grape should be grown much more widely in the North for its consistent wine quality, outstanding winter hardiness, and good cultural behavior. The wine from Louise Swenson has been outstanding for its quality and consistency from year to year. <i>Very slow to establish; plants are tiny at CREC. Could use fertilizer.</i>
9	Marquette	Northeastern Vine Supply	Red wine	U. Minn.	The wine is very complex with berry, cherry, black pepper and spice in the aroma profile and substantial tannin. Resistance to common grape diseases has been excellent and the vine requires only a minimal spray program. Selected by the U of MN.
10	MN 1200	U Minn	Red wine	U. Minn.	Trial variety from U-MN
11	Petite Amie	Winterhaven Vineyard	White wine	David McGregor	A white wine grape with muscat flavors. Ok in rich soils in Nebraska.
12	Prairie Star	Great River Vineyard	White wine	Elmer Swenson	Neutral wine. In some years, it develops a delicate floral nose that allows it to stand as a varietal wine. In most years, however, 'Prairie Star' is an ideal blending component to add body and finish to thin white wines. <i>Showing sensitivity to growth-regulator broadleaf herbicides at CREC. Slow to get started.</i>
13	Sabrevois	Great River Vineyard	Red wine	Elmer Swenson	This is a sister seedling to St. Croix. Very good disease resistance. Wine is dark in color, fruity with berry in the nose and flavor. Tannin can be fair with proper wine making. Pick early. <i>Wine can develop 'bacon' flavor.</i>
14	Somerset Seedless	Great River Vineyard	Table/Juice	Elmer Swenson	The hardiest seedless grape yet released for cold climates. Berries and clusters are medium size and loose. Flavor is good with a tiny vestigial seed sometimes apparent. <i>Really delicious and beautiful orangey-pink color.</i>
15	St. Croix	Northeastern Vine Supply	Red wine	Elmer Swenson	Bears medium sized blue berries on medium clusters. The vine is very hardy, vigorous, and disease resistant; very precocious in bearing. Cluster thinning may be required. Very Cold Hardy. Wine tends to be bland & neutral in character. Suitable for blending.
16	St. Pepin	Northeastern Vine Supply	White wine	Elmer Swenson	A sister seedling of LaCrosse but hardier, to around -26 F, earlier ripening and fruitier. Requires cross pollination. Produces a very fruity wine w/ a slight labrusca flavor. Also an excellent table grape. <i>Probably not fully hardy at CREC.</i>
17	Valiant	Great River Vineyard	Table/Juice	South Dakota State Univ.	<i>Fredonia x V. riparia.</i> Berries are small but have low acid and high sugar with good flavor. Makes outstanding grape juice and good jelly/jam. Often used for home wine. Susceptibility to downy mildew and black rot limit its value and is likely best suited to dry, arid climates of the far north. May be the hardiest named grape in the world. <i>Best for North Dakota.</i>
18	Clinton	Great River Vineyard	Table/Juice	<i>historic vine</i>	A spontaneous cross between the North American species <i>V. riparia</i> and <i>V. labrusca</i> dating back to 1835 when it was discovered in NY by High White. Very cold hardy and vigorous. Clusters are loose with medium-sized berries. <i>Similar to Bluebell in flavor, ripening. May not fully ripen at CREC. Only 12 vines.</i>
19	E.S. 8-2-43	Lincoln Peak Vineyard	White wine	<i>small sample</i>	Excellent wine, similar to a true muscat. Small clusters slow the harvest. Promising grape for short season, cold winter areas. <i>Very tasty fresh berries. Only 4 vines.</i>

Northern Hardy Fruits at NDSU-CREC

VARIETY		COLOR	ORIGIN	NOTES:
Honeyberry - <i>Lonicera caerulea</i> var. <i>edulis</i>				
1 Berry Blue	OGW	Blue	Russia	Reaching up to 8 ft. in height, Berry Blue™ produces abundant, tasty berries.
2 Blue Belle	OGW	Blue	Russia	A moderately vigorous bush with a more spreading habit, Blue Belle™ grows to 3-4 ft. in height with equivalent spread. Blue Belle™ bears good crops of deep blue, tasty berries. Fruit drops from plant when ripe. Harvest by shaking.
3 Blue Velvet	OGW	Blue	Russia	Attractive grayish-green, velvety foliage on a 3' tall x 4' wide plant. Berries are very large and tart with heavy, waxy bloom. <i>Blooms over a long time, starting 2wk or more after upright varieties. Not great fresh as they are so tart.</i>
4 Blue Moon	OGW	Blue	Russia	Blue Moon™ has gray-green, velvety foliage on a 3' tall x 4' wide plant. Berries are large and tart. Bloom period is long. <i>Both Blue Moon and Blue Velvet hide their fruit well and may not attract birds as readily as upright varieties.</i>
5 Kamchatka	OGW	Blue	Russia	A variety from eastern Russia. An attractive, upright, small shrub, it bears abundant, large, dark blue, sweet and tasty fruit. <i>Low production so far. Pick about 2 weeks after color changes; flavor declines if it hangs too long.</i>
6 Tundra - HASKAP	Canadian Propagator	Blue	US-Sk	'Tundra' may be the variety best suited for commercial production at this time (2007). Fruits were firm enough to withstand commercial harvesting and sorting at the University of Saskatchewan, yet tender enough to melt in the mouth. Drops from plant when ripe and blue throughout. Harvest by shaking.
7 Borealis - HASKAP	Canadian Propagator	Blue	US-Sk	'Borealis' was the best tasting and largest fruit size in US-Sk breeding program in 2007. Does not have the firmness of 'Tundra' and it is not suitable for IQF or mechanical sorting. It may be best for home gardeners or U-pick operations who can hand pick the delicate fruit. Drops from plant when ripe and blue throughout. Harvest by shaking. <i>Pretty tart at CREC.</i>
Juneberry/Saskatoon - <i>Amelanchier alnifolia</i>				
1 Thiessen	Prairie Plant Systems	blue	SK	Open-shaped bush with sprawling growth habit. Moderate suckering. Large-fruited berry; mild, pleasant flavor, fruit outstanding. Uneven ripening. <i>Ripening seems even at CREC. The sweetest variety.</i>
2 Martin	Prairie Plant Systems	blue	SK	A selection of Thiessen. Average berry size is larger and it ripens more uniformly. This is a great berry for U-Pick and have the most flavor of frozen berries.
3 Smoky	Prairie Plant Systems	blue	AB	Fruit is not as large as the other varieties. Smoky has the highest sugar/acid ratio of today's varieties. Habit is upright and spreading and suckers freely. An older variety. <i>At CREC, Smoky stops ripening in warm temperatures. Is the most susceptible to flower thrips and Entomosporium leaf and berry spot.</i>
4 Honeywood	Prairie Plant Systems	blue	SK	Productive, deep blue, full flavor variety. Flowers a bit later than other varieties and <i>ripens over a longer period</i> . Good for U-Pick. Low suckering. <i>Smaller, more firm berry.</i>
5 JB30	Prairie Plant Systems	blue	SK	Propagated from a wild plant found near Langham, SK. Exceptionally high yielding, with fruit reaching up to 15mm in diameter. The berries are deep blue when ripe and have an excellent fresh flavour.
Hybrid Plums (Native x <i>P. salicina</i>)				
1 Pembina	Hwy 200 Nursery, Glenfield, ND	Red	S. Dakota or Canada	Assiniboine x (<i>P. salicina</i> Red June) 1917. A dark red plum with a bluish waxy bloom on the skin. 4 cm fruit, very sweet flavorful flesh, semi freestone. Moderately sour skin. Ripens in Aug-September. <i>Pembina and Pipestone are very similar in flavor and appearance.</i>
2 Pipestone	Hwy 200 Nursery, Glenfield, ND	Red	Minn.	Burbank X (<i>Prunus salicina</i> X Wolf) Univ. of Minnesota 1942. Large fruit with deep red tough skin that peels easily. Yellow flesh is excellent quality for home and commercial use. Tree vigorous. Ripens Late August.
3 Waneta	Hwy 200 Nursery, Glenfield, ND	Yellow/Red	S. Dakota	Apple plum X Terry S. Dakota Expt. Sta. 1913. One of the best American plums. Fruit is very large, yellow in color washed with dark red. Flesh is deep yellow and juicy, sweet and <i>better flavored than Pembina & Pipestone</i> . Hardy at Morden, Manitoba. Ripens Early September. <i>2011, had 'blossom end rot'-like lesions on fruits.</i>
4 Toka	Hwy 200 Nursery, Glenfield, ND	Red/blue	S. Dakota	Native plum X <i>Prunus simoni</i> S. Dakota Expt. Sta. 1911. A small red plum. Flesh green-yellow and firm, with a sweet perfumed flavor. Superb pollinator. Ripens Late August. <i>Fruit at CREC has been small - about 1 inch diameter.</i>
5 Prairie Red	Lincoln-Oakes Nursery	Red/Yellow	S. Dakota	Seed-propagated plum derived from plant near Miller, SD, by USDA Plant Materials Center, Bismarck, ND. Fruit is larger while stem density and suckering is less than typical wild plum. <i>We are hoping this plant will provide better pollination of above four varieties.</i>

Northern Hardy Fruits at NDSU-CREC

VARIETY	COLOR	ORIGIN	NOTES:
Sea Berry - <i>Hippophae rhamnoides</i>	REMOVED		<i>Sea Berries may be invasive. Research before planting. These trees sucker profusely & have thorns. Fruit is not sweet, but 'Orange Delight' has amazing tropical flavor.</i>
