

INTERMEDIATE WHEATGRASS PREFORMANCE TEST

In cooperation with Dr. John Berdahl, Research Geneticist, USDA-ARS-Northern Great Plains Research Laboratory, Mandan, a performance test of 21 varieties and selected strains of Intermediate wheatgrass was seeded on May 7, 1987. The order of seeding is shown in the accompanying plot plan.

Above normal temperatures and for below average precipitation during the critical germination and early growth period combined to create very unsatisfactory conditions for successful establishment of this planting. Evaluation of success will be made in 1988.
