Other dry edible bean varieties released by the North Dakota Agricultural Experiment Station:

**Lariat** – (2007) Pinto Bean with medium maturity, high yield potential, and upright architecture with synchronous dry-down. Resistant to leaf rust and BCMV.

**Stampede** – (2007) Pinto Bean with medium maturity and high yield potential. Resistant to BCMV. Erect plant structure and synchronous dry-down.

---

Plant Quality Certified Seed

Certified seed is field inspected and lab analyzed to help ensure variety identity, germination, and purity. Contact your local seed producer or dealer for quality certified seed.

Seed producers or dealers can be found in the North Dakota Field Inspected Seeds Directory. The directory is available from the North Dakota State Seed Department (NDSSD), your NDSU Extension Service agent, or under the field seeds program of the NDSSD website www.ndseed.com

---

Varieties protected under PVPA with Title V option can only be sold as a certified class of seed. **It is the responsibility of the buyer and/or seller to confirm the PVP status of a specific crop variety prior to buying or selling the variety.** PVP status information can be obtained from the NDSSD.

Development of this variety was made possible through checkoff funds provided by the Northarvest Bean Growers Association and the North Dakota Dry Edible Bean Seed Growers Association.
ND Palomino Slow Darkening Pinto Bean

ND Palomino slow darkening pinto bean was jointly released by the North Dakota Agricultural Experiment Station and the USDA-ARS in 2016. ND Palomino slow darkening pinto bean offers the slow darkening trait and competitive agronomic performance.

ND Palomino has an upright indeterminate (short vine) growth habit (Type IIa), white flowers and matures in approximately 102 days.

Agronomic performance and seed color, size, and shape are within acceptable commerical ranges of popular pinto bean cultivars grown in North Dakota. Tested across 22 locations in ND and MN from 2012-2015 ND Palomino’s seed yield was similar to Stampede and Lariat.

ND Palomino is resistant to Bean Common Mosaic Virus (BCMV), but susceptible to rust race 20-3 and anthracnose race 73. Susceptibility to bacterial diseases such as common bacterial blight and halo blight is similar to the commercial checks.

Canning quality for ND Palomino is within acceptable commercial ranges.

NDSU strongly encourages the segregation of slow darkening pinto beans from conventional darkening pinto beans. Care should be taken during harvest and seed handling to prevent mixing.

Did you know?
- North Dakota is the largest producer of dry beans in the U.S.
- Dry edible beans are an excellent source of protein, fiber, micronutrients and antioxidants.

Seed yield (cwt/acre) performance of ND Palomino pinto bean compared to commercial varieties across 20 environments in ND and MN.
