Plant Quality Certified Seed

Certified seed is field inspected and lab analyzed to help ensure variety identity, germination, and purity. Contact your local seed producer or dealer for quality certified seed.

Seed producers or dealers can be found in the North Dakota Field Inspected Seed Directory. The directory is available from the North Dakota State Seed Department (NDSSD), your NDSU Extension Service agent, or under the field seed program of the NDSSD website.

www.ndseed.com

Varieties protected under PVPA with Title V option can only be sold as a certified class of seed. It is the responsibility of the buyer and/or seller to confirm the PVP status of a specific crop variety prior to buying or selling the variety. PVP status information can be obtained from the NDSSD.

Other soybean varieties recently released by the North Dakota Agricultural Experiment Station:

**ND Benson** – (2017) Conventional, 0.4 maturity. SCN resistance and phytophthora root rot resistance (races 3, 4).

For information on the availability of Foundation seed contact NDSU Research Extension Centers:

ND Stutsman was developed by the Soybean Breeding Program at North Dakota State University and released by the North Dakota Agricultural Experiment Station in 2017. ND Stutsman is a conventional soybean variety that is not resistant to glyphosate.

ND Stutsman has high yield potential and its relative maturity is 0.7, maturing one day later than Sheyenne.

ND Stutsman performed very well in trials across North Dakota and also in the Multi-State Uniform Regional Test. In 2012-2016 ND Stutsman produced 4 bushels/acre more than ND Bison and 2 bushels/acre more than Sheyenne in tests in North Dakota.

ND Stutsman is resistant to race 3 of phytophthora root rot. This new variety also has tolerance to iron-deficiency chlorosis (IDC) and is not prone to lodging.

ND Stutsman is not sensitive to metribuzin herbicide.

ND Stutsman has purple flower color, gray pubescence, brown pods, dull seed coat luster and yellow hila.

The North Dakota Crop Improvement and Seed Association has a license agreement with the NDSU Research Foundation to produce and distribute ND Stutsman seed. To help ensure genetic purity, ND Stutsman soybean will be protected under PVPA Title V and must be sold as a class of certified seed.

Development of this variety was made possible through funds provided by the North Dakota Soybean Council.

### General Characteristics

- 0.7 maturity
- High yield potential
- Phytophthora root rot resistance (race 3)
- Conventional
