Emerald ash borer (EAB) is a highly invasive, non-native beetle that attacks and kills all species of ash (*Fraxinus*) trees. Ash is one of the most common trees planted & found in North Dakota communities. The loss of these trees would be devastating from an ecological and economic standpoint. Given this threat and potential threats of invasive insects or diseases, it is in the long term interest of our state to increase the genetic diversity of the trees we plant. This can be done by planting multiple genera and species within these genera. (Examples of genera: Oak - *Quercus*, Birch - *Betula*, Linden – *Tilia*.)

The use of multiple genera and species will result in higher scores from the review committee.

**C. List the plant materials to be used**

Estimate the cost of plant materials to complete your project.

Size examples – 6' Bare Root (BR), 1½" (BR), #5 container, 1½" Balled and Burlapped (B&B)

(NDCC 43-07-02).
