

Welcome to the NDSU Potato Blightline for August 18 sponsored by Syngenta Crop Protection.

Current recommendations:

Late blight has not been reported in our region of ND, MN or MB. Growers should be applying protectant fungicides for both late blight and early blight and continue to scout for late blight. Morning dews that form this time of the year provide free moisture necessary for late blight infection.

Late blight has been reported in Bingham County in southwestern Idaho.

Plan to attend the Northern Plains Potato Growers Association field days at Larimore, Inkster and Hoople this Thursday August 21.

Thank you for using the NDSU Blightline
