

A cattle operation can produce and feed 11,250 pounds of feed per year or 45,000 pounds in four years, whether by grazing or feeding.

Which option would you take?

Option A

Stock four cows that average 1,400 pounds of body weight and are estimated to consume 11,242 pounds of feed per year, for a total of 44,968 pounds in four years

_____ Or _____

Option B

Stock five cows that average 1,100 pounds of body weight and are estimated to consume 8,833 pounds of feed per year, for a total of 44,165 pounds in four years
