

## **Wheat Midge Degree Days**

Used as a Guideline for HRSW Risk Assessment

HRSW planted **PRIOR** to accumulating **200 DD** will head before wheat midge emerge.

HRSW planted **FROM 200 to 600 DD** will be heading at the time wheat midge is emerging.

HRSW planted **AFTER 600 DD** will head after peak emergence and should be at low risk to midge infestation (however, a higher risk of frost).

Guidelines to identify at risk planting dates for wheat midge infestation in hard red spring wheat.
