North Dakota Research Farm Seasonal Position

The BASF North Dakota Research Farm has an opening for a seasonal position to assist in carrying out farm research trials. Seasonal personnel are expected to participate in all aspects of research center activities including planting, plot maintenance, data collection, harvesting, and preparing for site tours. Extended hours may be required during busy times. The North Dakota Research Farm (NDRF) conducts research involving most field crops grown in the area.

Position opening is May through September 2016 but could be starting as early as February and going as late as October depending on the persons interest and/or class schedule. Work schedule, when classes are in session, will be flexible.

The individual will be required to run small plot equipment, tractors, sprayers etc. Majority of summer work will be outdoors involved with field plot research, planting, plot establishment, maintenance, organizing and completing seed treatment, herbicide, fungicide, insecticide, fertility trials, and harvesting.

A key component of the position will be helping to conducting trials to insure high quality data can be collected on specific crop production products being examined by BASF.

Location: BASF NDRF - Davenport, ND

Qualifications:

Individual with the desire to assist with research involving seed treatment, herbicide, fungicide, insecticide and fertilizer research. Farm background and mechanical skills are beneficial to be able to maintain, modify and operate farm equipment.

Individual must display a high degree of self-motivation, initiative and ability to work well with others. Compensation will be based on experience and ability to perform job related tasks.
