

September 12, 2017

Welcome to the NDSU Potato Blightline sponsored by Syngenta Crop Protection.

Current recommendations:

No new late blight HAS been reported in the past two weeks. All of the late blight in ND, MN and MB was US23. This will be the final NDSU Potato Blightline for 2017.

We want to thank Syngenta Crop Protection for sponsoring the Blightline, and also thank the many consultants, growers, allied industry reps, and others who sent samples and notified us of late blight sightings. That is truly helpful as late blight is a community disease and we all need to manage it together. We anticipate the Blightline in 2018 and are working to develop a phone app for late blight to be announced later.

Thank you for using the NDSU Blightline.
