Reviewed April 2014
Most of us experience some joint stiffness during seasonal changes. However, degenerative diseases such as arthritis can inhibit daily activities. Help keep your joints mobile with these tips:

**Stay Fit**
Be good to your joints by staying faithful to a physical activity routine. Benefits of fitness routines include:
- **Weight loss**
  - Less weight = less strain on your joints
- **Reduced risk of osteoarthritis**
- **Improved flexibility**
  - More flexibility = possible improvement in pain and performance and reduced disability

**Exercise Tips**
- Begin new exercises slowly.
- Keep joints warm.
- Stretch and warm up.
- Keep to low-impact exercises, not bouncing movements that stress joints.
- Don’t do anything that causes more pain.

**Eat Smart**
Eating a balanced diet with plenty of fruits, vegetables and omega-3 fatty acids also is important for joint health. Get 2 to 3 cups of fruits and 2 to 3 cups of vegetables each day to maintain adequate nutrition and provide your body with vital antioxidants.

**Consider Some Extras**
If your doctor has recommended adding a supplement, be careful to follow the instructions on the label. Common supplements taken to relieve joint pain include:
- Glucosamine/Chondroitin
- Omega-3/fish oil
- Tart cherry
- Turmeric

**Try these joint-friendly fitness ideas:**
- Water aerobics
- Swimming
- Dancing
- Cross-country skiing
- Biking
- Elliptical machines

**Stay Hydrated**
Drinking plenty of water is important to prevent dehydration and for keeping joints lubricated. Often as we age, our thirst mechanism stops working as well, so drink water even when you might not feel very thirsty.

**Did You Know?**
Those who lose weight cut their risk of osteoarthritis in half.
