North Dekote Wheet Nitreyon Coloulater			

#### North Dakota Wheat Nitrogen Calculator

You will need to know the location of the farm, the general productivity of the soils, the price you contract for wheat, the cost per pound of N, the soil test nitrate-N to a depth of 2-feet, and the previous crop.

Please select the location of the farm. The map of North Dakota on this site will help you determine the region of the farm. Click on the map for a detailed view.

Why is the aggregated relationship of yield and available N so 'diffuse', when the relationships within sites are so highly related? Combining all sites with actual yield at N rate looks like this

Total known available N

When it really looks like this-

Total known available N

To get a better idea of what the data look like without showing all the curves is to 'Normalize' the data- putting it all in the same scale

For example-

A wheat site with high yield 80 bu/acre, divide all yields by 80, and we end up with values from 0 to 1

A wheat site with high yield 40 bu/acre, divide all yields by 40, and we end up with values from 0 to 1

A wheat site with high yield 60 bu/acre, divide all yields by 60, and we end up with values from 0 to 1

#### Normalizing yields at all sites ends up looking like this-

If N rate and Yield were related between sites, the graphs would look like this after they were normalized

## Western ND No-Till wheat sites raw yields

#### Western ND No-Till wheat sites normalized yields

Low yield environment-

usually drier (sometimes excessive wetness) Lower N use efficiency and crop uptake Less N mineralization

High yield environment-

Moisture near ideal- not too wet or too dry Higher N use efficiency and crop uptake Greater N mineralization

Net result is that rate to produce economic max yield is similar in both environments.

🍠 Start 📋 KINGSTON (G:) 🛛 😻 North Dakota Wheat 🖳 Document 1 - Microsoft	≪ 20 10:52 AM

There is a new phone app for Android and Iphones for the 3 N calculators, including wheat.

Go to app store and search for North Dakota Crop Nitrogen Calculator follow the instructions.

It's free to download.

Is the protein increase with the recipe real?

Are N applications after the water-ripe stage real?

### Wheat yield with 30 lb N timing relative to flowering period, from Finney et al., 1957

Finney et al., 1957, Agronomy Journal

Days relative to flowering period (day 0 represents all days of flowering)

#### Finney et al., 1957, Agronomy Journal

#### Relationship of Loaf Volume with Grain Protein from Post-N

Protein from post-N enhancement

Finney et al., 1957, Agronomy Journal

### The bottom-line of this research, and follow-up work conducted at Carrington, Minot, Langdon during the late 1990's is

- Protein increase is maximized when N is applied **immediately post-anthesis** (watery-ripe stage).
- Profitable protein enhancement is maximized with a rate of
   30 lb N/acre (UAN or urea solution if biuret content is low)

#### 'The Recipe' is:

10 gallon UAN with 10 gallon water Apply immediately post-anthesis Apply cool of the day (mornings preferably to evenings) Do not apply with fungicide Use flat-fan nozzles, broadcast Expect leaf burn, but it's not important

# Valley City protein response to 5-leaf N-Pact application over preplant urea rates, 2008.

## Protein response of post-anthesis N-Pact application, 3 gal/acre. Valley City, 2008

# 2009 Carrington, ave. 2 sites, post-anthesis application for protein enhancement. Schatz

#### Faller yields over 100 bu/acre

Slide courtesy of Greg Endres, NDSU, Carrington REC

# Don't skimp on starter P for wheat and barley

Apply chloride for malting barley especially if soil test is low. Increases plump and helps to reduce effect of lower barley yield due to reduced kernel size.

### Wheat yield increase from broadcast or Banded P. Average of six sites, Zubriski,

P <sub>2</sub> O <sub>5</sub> applied, lb/a				
Banded with seed			Broadcast	
12	24	48	48	
3.8	5.0	5.5	3.3	

### Banded P vs Broadcast in Wheat, Rasc, MB

Rate of P <sub>2</sub> O <sub>5</sub> , lb/a				
0	25 banded	25 brdcst	50 banded	50 brdcst
Wheat yield, bu/a				
35	40	39	43	40

Similar in size of response (2-4 bu/acre) higher than broadcast in SD, ND. (about 10% yield increases, consistently)

#### Summary-

- -Use of the N calculator for wheat for most profitable N rates. Use common sense to determine the rate best suited to your farm and variety.
- -Yield goal is not a factor in N rate
- -Protein enhancement is possible with the proper rate and timing of in-season N
- -Use of slow-release liquids at reduced rates are no more efficient than UAN
  - -Band apply P
