North Dakota Tree Selector

Lilac, Pekin - *Syringa* pekinensis

Pekin lilac is a small tree or tall shrub that can be multi-stemmed, though it is non-suckering. The large, creamy white, fragrant flower clusters appear in mid-June. Pekin lilac has good drought tolerance once it is established, but establishment may be difficult on dry soils. The shiny/glossy cherry-like bark on older trees is a feature that adds visual interest to the landscape. The variety Copper Curls™ was selected for its coppery-orange, peeling bark and large flower clusters. Copper Curls™ is an NDSU release and is hardy to Zone 3.

General	
Family	Oleaceae - Olive
Hardiness	To Zone 3
Leaves	Deciduous
Plant Type	Tree

Growth	
Growth Rate	Medium
Mature Height	<25'
Longevity	Long
Power Line	Yes

Ornamental		
Flowers	Showy	
Flower Color	Cream,White	
Fall Color	Yellow	
Fruit Color	Tan	

Tolerances		
Shade	Low	
Drought	Medium	
Flooding	Low
