

Farm Management Planning Guide

December 2007

Projected 2008 Crop Budgets North Central North Dakota

Andrew Swenson, Farm Management Specialist
Ron Haugen, Farm Management Specialist

The 2008 crop budgets provide an estimate of revenues and costs for selected crops. Each set of budgets are developed for a multi-county region. There is considerable variation in soil type and productivity, weather conditions, as well as management and production practices within each region. Therefore, **THESE BUDGETS ARE ONLY INTENDED TO BE USED AS A GUIDE. EVERY INDIVIDUAL IS HIGHLY ENCOURAGED TO DEVELOP HIS/HER OWN BUDGETS!**

The profitability budget accounts for full economic opportunity costs for land and machinery investment, regardless of farm operator equity position. The bottom line is the return to labor and management. This is the expected "payment" to the producer for the labor and managerial efforts required by the crop

enterprise. Each individual must make the decision whether it is sufficient.

The budget can be changed to conform to the more common definition of accounting profit (return to unpaid labor and management, and owner equity) by replacing the machinery investment and land charge cost items with your per acre interest, or rental, expense of machinery and land, and real estate tax if land is owned, respectively.

The budget can be used for long run decisions if the revenues and costs are realistic for several years. (Crop prices, direct costs, and the land charge are best estimates for only the 2008 crop year, but crop yields are historic averages and machinery ownership costs are an average for the total length of ownership). If the budget shows a high return to labor and management, and is representative for several years, increased acreage and corresponding investment should be considered. However, if long-run returns to labor and management are unsatisfactory the best decision may be to exit the crop enterprise and employ the machinery and land investment, and labor and management, in a different enterprise or investment.

NDSU
Extension Service

North Dakota State University, Fargo, ND 58105

For short-run planning decisions you can omit the indirect costs if the land and machinery required to produce the different enterprises are in place. Simply compare the crop enterprises by calculating return over direct costs. Labor requirements and risk should also be considered. Insurance is not available for some crops.

The budget can be used to estimate cashflow by making a few modifications. Machinery depreciation should be omitted and the machinery investment number replaced with your per acre principal and interest payment on machinery debt. For owned land, the land charge should be replaced with your per acre real estate tax and principal and interest payment on land debt.

The 2002 farm bill has expired and a new farm bill had not yet passed at the time of this publication. Projected crop prices are higher than average and no government payments, coupled to 2008 production, are expected.

Primary Assumptions:

Crops are planted on dryland recrop ground. Costs of moving crop to local market/storage are included.

Market Price: Best estimates of NDSU extension economists. The greater of projected market price and marketing loan rate is used.

Market Yields: Average yield for the 7 year period 2000-2006, after the low and high yield years are removed. Yields for safflower, yellow mustard, buckwheat, millet, rye, lentils and chickpeas are from NDSU extension agronomists and industry sources.

Fertilizer: Cost of fertilizer applied, based on soil test, to meet yield goal of 130% of market yield. N fertilizer can be reduced if previous crop was soybean, dry bean, field peas or lentil.

Soil test - recrop:
 Nitrogen - 40 lb
 Phosphorus - 8 ppm
 Potassium - 363 ppm

Fertilizer prices:

Nitrogen - .42/lb
 Phosphorus - .40/lb
 Potassium - .29/lb

Seed Prices:

Spring Wheat 11.25/bu
 Durum 19.50/bu
 Barley 8.50/bu
 Corn grain RR/Bt 1.77/thou.kern.
 Corn grain RR 1.60/thou.kern.
 Oil Sunflower .72/thou.kern.
 Conf. Sunflower 1.30/thou.kern.
 Soybean RR 30.50/50 lb
 Dry Beans .67/lb
 Flax 16.50/bu
 Canola 3.65/lb
 Oats 5.00/bu
 Field Peas 10.50/bu
 Millet .24/lb
 Buckwheat .33/lb
 Lentils .34/lb
 Mustard .88/lb
 Rye 4.50/bu
 Winter Wheat 10.00/bu

Fuel prices:

Diesel 2.90/gal
 Gas 3.10/gal

Lubrication charge: 15% of fuel cost

Crop Insurance: Coverage levels are 70% on all insurable crops. MPCI estimates are used, except for RA-HPO on all wheat, soybeans and canola.

Miscellaneous: soil testing, machinery rent and custom work.

Operating Interest: Direct costs charged 7.50% interest for 6 month period.

Misc. Overhead: Machinery housing and insurance at .5% and .85%, respectively, of average machinery investment. Also, liability insurance and license fees of trucks. In addition, \$1 per acre is assumed for general farm utilities, farm publications, meetings, dues, income tax preparation, legal fees, etc.

Land charge = average cash rent.

Machinery investment: 4.5% real interest rate, over the years of machine ownership, is charged on average machinery investment. The real, or inflation adjusted, rate is the commercial rate minus the inflation rate. Ave. mach. investment = (Purchase price + Disposal price)/2

Depreciation = (Purchase price - disposal price / years ownership)

Spring Wheat

Durum

-Total Costs	5.33	_____	6.18	_____

notes:

*Early season foliar fungicide would cost about \$3-\$4 and late season fungicide would cost about \$6 or \$12 per acre, depending on product availability, plus application. Trials consistently show yield response of 5-10% with early season fungicide, if wheat planted into residue, and 15-20% with late application if weather favors disease development.

**Orange wheat blossom midge insecticide would cost about \$5 per acre plus application.

Barley notes:

*On average, about 45% of production is feed quality.
Use \$3.34 estimate for feed barley price.

Corn notes:

*RR/Bt corn is planted for corn borer control on 80 percent of acres and RR corn without Bt Trait is on 20 percent of acres for corn borer refuge.

**Insecticide seed treatment for wireworm, rootworm, white grub and suppression of cutworm.

***Crop insurance only available by written agreement in some counties of the region.

Soybean notes:

*Roundup (glyphosate) resistant soybeans.

Drybean notes:

*Acreage limitations existed under the 2002 farm bill. The general rule is drybean acres can not be planted on base acres. If farm or producer has drybean history, drybean can be planted on base acres but government payments on those acres will be forfeited.

Example Sequence of Operations

Field operations sequence for spring wheat and durum

OP. NO.	DESCRIPTION	(FEET) WIDTH	(MPH) SPEED	(AC/HR) Fld Cap	(\$/AC) FUEL & LUBE	(\$/AC) EST. REPAIRS
1	Chisel + NH ₃	35	4.5	16.2	\$ 2.53	\$ 1.16
2	Pick Rocks				0.50	0.43
3	Plant	35	5.0	14.8	2.77	3.71
4	Spray (130%)	90	6.0	42.5	0.45	0.63
5	Swath (20%)	25	5.0	12.1	0.24	0.15
6	Combine	25	4.0	8.5	3.98	3.34
7	Heavy Harrow	70	5.5	39.7	0.59	0.49
	Trucks*				1.59	0.56
	Grain auger (pto)				0.20	0.01
	Pickup truck allocation				1.80	0.48
Total					14.43	10.89

* Truck costs will vary between crops.
